

MANUAL CAPPUCCINATORE

SETUP & USE

The further you open the cappuccinatore, the more you froth the milk. So:

Close = Warm milk

Open slightly (\pm quarter turn) = Milk foam

Steam knob

If you then open the large steam knob on the right of the machine, the cappuccinatore will start working.

CLEANING THE CAPPUCCINATORE

- i** Milk is a bacteria-sensitive product. It is therefore required that the cappuccinatore is regularly and thoroughly cleaned with (lukewarm) water.

You can easily rinse the cappuccinatore after use by:

1. Taking the tube out of the milk,
2. Hang the Tube in cold / lukewarm water.
3. Open the Steam knob of the machine. The water will clean the cappuccinatore.

At the end of the day:

Clean the cappuccinatore with a cappuccinatore cleaner (Also available at Aequinox)

Start cleaning by following the instructions on the packaging.
